**Rockcliff Intersects VMS Mineralization at Snow Lake VMS Project
Second Phase 15,000m Drill Program Planned**

SUDBURY, Ontario. Rockcliff Resources Inc. (**RCR: Tier 1 TSX-V**) is pleased to announce that a minimum drill program totalling 15,000m is planned on the Snow Lake VMS Project located in central Manitoba. Drilling will commence once winter breakup is complete. The Company's first phase drill program has now been completed in which 38 drill holes totalling 8,300m tested VMS (copper, zinc, gold and silver) mineralization on three properties at the Snow Lake VMS Project. Twenty-seven holes were completed at the Rail Property, seven holes at the Kof Property and four holes at the Sylvania Property. A total of 33 drill holes intersected significant VMS mineralization. All VMS zones intersected in the drilling are open along strike and at depth and are worthy of additional drilling. Significant drill results of the Phase 1 drill program can be viewed on the Company's website at www.rockcliffresources.com. The project is located within the Flin Flon Greenstone Belt, one of the most prolific and the largest Paleoproterozoic VMS district in the world.

Highlights from the final holes of the Phase 1 program at the Kof Property (K08-03 to 07) and from the Sylvania Property (SY08-03) are tabulated below including:

Sylvania Property

- **2.21m grading 2.68% copper and 403 ppb gold.**

Kof Property

- **5.49m grading 1.59% copper, 0.07% zinc and 409ppb gold including 1.07m grading 3.41% copper, 0.09% zinc and 540ppb gold and**
- **3.60m grading 1.66% copper, 0.04% zinc and 80ppb gold.**

The lengths reported are drill intersected core lengths and do not represent true widths. VMS mineralization on both properties strike approximately north-south and dip to the east. All drill holes were drilled from east to west.

Borehole	From (m)	To (m)	Length (m)	Copper %	Zinc %	Gold ppb	Grid N/E/Azimuth/Dip*
SY08-03	146.15	148.36	2.21	2.68	<0.01	403	-100N/260E/274/-50
K08-03	222.20	227.69	5.49	1.59	0.07	409	78N/2305E/303/-66
includes	226.62	227.69	1.07	3.41	0.09	540	
K08-04	121.16	124.36	3.20	1.08	0.02	102	80N/-2370E/303/-45
includes	121.16	121.92	0.76	1.63	0.02	90	
K08-06	167.18	171.30	4.12	1.03	0.06	89	80N/-2370E/303/-71
includes	167.18	167.48	0.30	2.09	0.02	140	
K08-07	146.61	150.21	3.60	1.66	0.04	80	76N/2180E/303/-45

K08-05 and SY08-04 were abandoned due to caving before reaching target. (m) = metres, % = percentage, ppb = parts per billion, * Imperial grid used. Co-ordinates are approximate.

Rockcliff's second phase of drilling will initially focus on the Lon and Rail Properties and on identifying the source of several untested high priority targets identified from the recently completed airborne survey by Geotech Ltd of Aurora, Ontario. Rockcliff recently raised approximately \$4.2 million for its 2008 exploration program at the Snow Lake VMS Project. Please refer to the news release dated May 1, 2008 for further details.

Rockcliff has the exclusive right to earn a 100% interest in each of the Sylvania and Kof Properties from Hudson Bay Exploration and Development Company Limited (**HBED**), a wholly owned subsidiary of HudBay Minerals Inc. (**HBM: TSX**). If Rockcliff earns its interest in the Sylvania and/or Kof Property, HBED will receive a 2% Net Smelter Return Royalty. If Rockcliff earns a 100% interest in the Sylvania and/or Kof Property, HBED then has the right to acquire up to a 65% interest in the properties. Please refer to the News Release dated March 23, 2007 for further details.

QA-QC STATEMENT

Peter Wood, P.Eng., P.Geo., VP Exploration of Rockcliff, a Qualified Person under the definition of National Instrument 43-101, is responsible for the technical information in this press release and is responsible for verification and quality assurance of Rockcliff's exploration data and analytical results. Samples of half core are packaged and shipped directly from Rockcliff's field office to TSL Laboratories (TSL), Saskatoon, Saskatchewan. TSL is a Canadian assay laboratory and is accredited under ISO/IEC 17025. Each bagged core sample is dried, crushed to 70% passing 10 mesh and a 250g pulp is pulverized to 95% passing 150 mesh for assaying. A 0.5g cut is taken from each pulp for base metal analyses and leached in a multi acid (total) digestion and then analyzed for copper, lead, zinc and silver by atomic absorption. Gold concentrations are determined by fire assay using a 30g charge followed by an atomic absorption finish. Samples greater than upper detection limit (3000 ppb) are reanalyzed using fire assay gravimetric using a 1 AT charge. Rockcliff inserted certified blanks and standards in the sample stream to ensure lab integrity. Assay results are also sent directly to Rockcliff's independent QC consultant who monitors the lab's performance on an ongoing basis and ensures the quality of the results.

Rockcliff Resources Inc.

Rockcliff Resources Inc. is a Canadian resource exploration company focused on becoming mine finders through the acquisition and advancement of high-quality mineral assets associated with world class geology and in world class mining camps. Rockcliff presently controls the Snow Lake VMS Project totalling approximately 1,800 km² and located within the Flin Flon greenstone belt. The project presently includes five historical VMS deposits and numerous additional areas with potential for VMS and nickel-copper-platinum group metal mineralization. Rockcliff also controls the Shihan VMS Project located in Northern Ontario.

For more information please visit our website at www.rockcliffresources.com or contact Ken Lapierre, P.Geo., President and CEO of Rockcliff Resources Inc. at (705) 688-9800 or at therock@rockcliffresources.com.

Forward Looking Statement:

Some of the statements contained herein may be forward-looking statements which involve known and unknown risks and uncertainties. Without limitation, statements regarding potential mineralization and resources, exploration results, and

future plans and objectives of the Company are forward looking statements that involve various risks. The following are important factors that could cause the Company's actual results to differ materially from those expressed or implied by such forward looking statements: changes in the world wide price of mineral commodities, general market conditions, risks inherent in mineral exploration, risks associated with development, construction and mining operations, the uncertainty of future profitability and the uncertainty of access to additional capital. There can be no assurance that forward-looking statements will prove to be accurate as actual results and future events may differ materially from those anticipated in such statements. Rockcliff undertakes no obligation to update such forward-looking statements if circumstances or management's estimates or opinions should change. The reader is cautioned not to place undue reliance on such forward-looking statements.

The TSX Venture Exchange does not accept responsibility for the adequacy or accuracy of this release.
