## **Rockcliff Solidifies Land Position at Snow Lake Stakes Strategic Ground on Mineral Exploration Licences**

**SUDBURY, Ontario.** Rockcliff Resources Inc. (**RCR: Tier 1 TSX-V**) is pleased to announce that it has acquired, through staking, additional properties covering numerous “high priority” VTEM airborne anomalies within its Snow Lake Project located in central Manitoba. The properties are associated with favourable rocks prospective for VMS mineralization. Thirteen blocks of claims totalling 2,988 hectares were staked covering numerous VTEM anomaly trends with strike lengths ranging from 100 to 2000 m. The staked ground was part of Rockcliff’s high priority staking program within their Mineral Exploration Licenses (MEL). The MELs (approximately 130,000 hectares) have since been surrendered back to the Province of Manitoba and Rockcliff now controls 100% interest in the newly staked properties. The Snow Lake Project, including the newly staked properties, now covers a total of 52,667 hectares (527 km<sup>2</sup>) of highly prospective VMS ground within the prolific Flin Flon greenstone belt. The belt is one of the most prolific and the largest Paleoproterozoic VMS district in the world.

Kenneth Lapierre, President and CEO of Rockcliff commented, “With the additional staking and surrendering of the MELs, the Snow Lake Project has been streamlined to slightly over 52,000 hectares from its previous area of over 180,000 hectares. The project continues to host five VMS deposits, the R1 VMS Zone, the Jackfish nickel zone and numerous untested base metal targets with potential for discovery. Future exploration, including drilling, will focus only on “high priority” areas within the project”.

### **Rockcliff Resources Inc.**

Rockcliff Resources Inc. is a Canadian resource exploration company focused on the Snow Lake VMS Project located in central Manitoba. The project totals in excess of 527 km<sup>2</sup> and is located within the prolific Flin Flon greenstone belt. The project presently includes five historical VMS deposits (Lon, Rail, Reed, Kof, Sylvia), the R1 VMS Zone, the Jackfish nickel zone and numerous additional areas with potential for VMS and nickel mineralization. Rockcliff also controls the Shihan VMS Project located in Northern Ontario.
